# Asset Management

- **Identify and record all waste assets**

- **Get a clear understanding of your waste infrastructure**

- **Simplify tracking, communication and invoicing**

- **Introduce incentive programs**

- **Provide service verification**

Sensoneo Asset Management solution enables you to **digitize your waste infrastructure.** It combines **RFID tags, Smart Waste Management System and Citizen App.** By tagging all bins and containers you identify and record all assets in a digital inventory in the Smart Waste Management System (Bin Management module). The solution **simplifies bin tracking, communication and invoicing, and restrains unauthorized use of bins**. A clear and accurate overview of all bin assets is the key and the very first step leading towards smart waste management.

Sensoneo offers 3 types of bin tags - **transponders, PVC plates and labels.** Visual identification is ensured by a **numerical code, bar code or QR code.** Bin details are available via Citizen App by scanning the code on the tag with a phone camera. The Sensoneo solution **does not require the use of any readers.** For signed users, Citizen App offers features for asset mapping, service verification and requests for collection or maintenance.

Your waste infrastructure is digitalized in **Bin Management**, one of modules in the Smart Waste Management System, Sensoneo powerful cloud-based platform on MS Azure. Bin Management offers **bin inventory, a digital interactive map, tools for qualitative analysis of your waste infrastructure (bin distribution, capacity), maintenance records, collection records and an overview of citizen feedback.**

Price list: Asset Management

Asset Management solution is available as a package - tags, Bin Management and Citizen App. Both tags and Bin Management are also available separately. Citizen App is complementary to Bin Management.
